GENERAL SAFETY INSTRUCTIONS

Extreme caution should be used when operating all power tools. Know your power tool, be familiar with its operation, read through the owner’s manual and practice safe usage procedures at all times.

 ALWAYS read and understand the user manual before operating the machine.

 CONNECT your machine ONLY to the matched and specific power source.

 ALWAYS wear safety glasses respirators, hearing protection and safety shoes, when operating your machine.

 DO NOT wear loose clothing or jewelry when operating your machine.

 A SAFE ENVIRONMENT is important. Keep the area free of dust, dirt and other debris in the immediate vicinity of your machine.

 BE ALERT! DO NOT use prescription or other drugs that may affect your ability or judgment to safely use your machine.

 DISCONNECT the power source when changing drill bits, hollow chisels, router bits, shaper heads, blades, knives or making other adjustments or repairs.

 NEVER leave a tool unattended while it is in operation.

 NEVER reach over the table when the tool is in operation.

 ALWAYS keep blades, knives and bits sharpened and properly aligned.

 ALL OPERATIONS MUST BE performed with the guards in place to ensure safety.

 ALWAYS use push sticks and feather boards to safely feed your work through the machine.

 ALWAYS make sure that any tools used for adjustments are removed before operating the machine.

 ALWAYS keep the bystanders safely away while the machine is in operation.

 NEVER attempt to remove jammed cutoff pieces until the saw blade has come to a full stop.
CX205/CX206
SPECIFIC SAFETY INSTRUCTIONS

† NEVER use a saw blade that has missing carbide teeth, loose teeth, or chipped or broken teeth.

† NEVER stand directly in line with the saw blade when feeding stock into the saw.

† NEVER place your fingers or hands in the line of cut. If you slip, your hands or fingers may come into contact with the blade. Always use a push stick when ripping narrow pieces.

† NEVER allow visitors or helpers to stand in line with the saw blade.

† ALL GAURDS must be in place while operating the table saw to ensure safety.

† ALWAYS feed the stock smoothly. Do not force or twist the work-piece while cutting.

† NEVER allow anyone to “assist” you by holding your work-piece at the out-feed end.

† MAKE SURE before making any adjustments, the switch is in the “OFF” position and the cord is un-plugged.

† NEVER LEAVE the table saw unattended while it is running.

† DO NOT attempt to remove jammed pieces unless the table saw has come to a complete stop and the power switch has been turned to the OFF position and cord is unplugged.

† NEVER attempt to cut stock “freehand”, always use the rip fence or miter gauge.

† ALWAYS make sure that the rip fence is properly squared to the saw blade to prevent kickback.

† ALWAYS make sure that your saw is in a stable position. Cutting heavy, long stock may alter the stability of the saw. In the event that this may occur, the saw should be firmly bolted to the floor.

† ALWAYS be sure that if using a mobile base, wheels are firmly locked before turning the saw on.

† ALWAYS use a feather board and/or hold-downs to support your work-piece when necessary.

† MAKE SURE you have read and understood all the safety instructions in the manual and you are familiar with your table saw, before operating it. If you fail to do so, serious injury could occur.

WARNING
The safety instructions given above can not be complete because the environment in every shop is different. Always consider safety first as it applies to your individual working conditions.
As part of the growing line of Craftex woodworking equipment, we are proud to offer CX205 - 10" Left Tilt Table Saw. The Craftex name guarantees Craft Excellence. By following the instructions and procedures laid out in this owner's manual, you will receive years of excellent service and satisfaction. The CX205 is a professional tool and like all power tools, proper care and safety procedures should be adhered to.

- Rear Fence Rail
- Blade Height Lock
- Blade Height Hand Wheel
- Blade Tilt Lock
- Blade Tilt Hand Wheel
- Fence Lock Knob
- Hand Wheel
- Fence
- Lock Knob
SETUP

Before setting up your machine you should read and understand the instructions given in this manual.

The unpainted surfaces of this table saw are coated with rust prevention waxy oil and you will want to remove this before you begin assembly. Use a solvent cleaner that will not damage painted surfaces.

WARNING

CX205/CX206 is a very heavy machine, do not over-exert yourself. For safe moving method use fork truck or get the help of an assistant or friend.

UNPAKING

The machine properly packaged and is shipped completely in 3 crates for safe transportation. When unpacking, carefully inspect the crate and ensure that nothing has been damaged during transit. Open the crate and check that the machine is in a good condition.

**Proper Grounding**

Grounding provides a path of least resistance for electric current to reduce the risk of electric shock.

CX205 is equipped with a 220-V single phase motor and provided with a power supply cord that is to be connected directly to the source. See figure-3.

CX206 is equipped with a 220-V single phase motor and features a terminal block in the electrical connection box and is not supplied with a power cord.

Make sure that the machine is connected to an outlet having the same configuration. If an adaptor plug is used, it must be attached to the metal screw of the receptacle. To prevent electrical hazards, have a qualified electrician ensure that the line is properly wired.

It is strongly recommended not to use extension cords with your CX205/CX206. Always try to position your machine close to the power source so that you do not need to use extension cords.

When it is necessary to use an extension cord, make sure the extension cord does not exceed 50-feet in length and the cord is 12-gauge to prevent motor damage.

Your CX205/CX206 should be wired with a plug having 3-prongs to fit a 3 prong grounded receptacle as shown in figure-3.

Do not remove the grounding prong to fit it into a 2-pronged outlet. Always check with a qualified electrician if you are in doubt.

**WARNING**

Improper connection of the equipment-grounding conductor can result in a risk of electric shock. Check with a qualified electrician if you are in doubt as to whether the outlet is properly grounded.
ASSEMBLY

CX205/CX206 features 4 mounting holes on its base. To mount and level the table saw on your shop floor, shimming may be required. Mounting the saw to the floor reduces vibration and increases stability.

IMPRESSANT

Place the table saw on a flat and level surface, and make sure that the mobile base is locked before proceeding to assembly if using a mobile base.

Motor Cabinet

Take the motor cabinet and attach it to the table saw by inserting the hinge pins into the hinge sockets on the cabinet. See figure-4

Hand Wheels

The hand wheels for the blade height and blade tilt are provided with the parts of the machine. Simply slide the hand wheel on shaft secure it with a set screw provided. See figure-5

Figure-4 Installing the motor cabinet

Figure-5 Installing blade height hand wheel

Insert the crank handle into the hand wheel shaft and secure it by rotating a few turns.

Figure-6 Installing blade tilt hand wheel

Extension Wings

Remove all the screws from the end of the main table and clean mating surfaces of the main table and the extension wings. Make sure there is no debris or any foreign material on the mating surfaces of the main
table and the extension wing which can cause misalignment and the wings can not be properly attached to the table.

Attach the extension wings to the table using the screws removed from the main table. Place a straigntedge across the extension wings and the main table to make sure that the extension wings surface is flat with the main table.

Figure-7 Installing the extension wings

**IMPORTANT**

*If the outside end of the extension wings tilts down or up, use a strip of masking tape to align it with the main table.*

Figure-8 Installing the front rail

**Fence Rails**

Take the front and rear rails and attach it to the table saw using washer and screws provided. Place the rail tube on the front rail and secure it using screws and washers.

Figure-9 Installing the rear rail

**Fence Assembly and the Miter Gauge**

Place the fence on the front and rear rails on the right hand side of the blade. Lock the fence on the rails using the cam lock lever. See figure-10
After the fence is installed on the rails, take the miter gauge and slid it into the T-slot on the left hand side of the table.

**Magnetic Switch**

The magnetic switch can be installed to the bottom left hand side of the front rail using hex bolts and washers provided.

First, remove the blade flange and the arbor nut. Check that the mounting hole of the blade matches the diameter of the arbor. (CX206 comes with a standard 1” arbor & CX205 comes with a 5/8” arbor).

Ensure that the spindle and arbor itself are clean and dirt free. Mount the arbor to the spindle and tighten the arbor to the spindle. Then, mount the blade so that it spins in the proper direction (teeth pointing towards the front of the saw). Finally, replace the nut and flange and tighten securely. Do not over tighten.

**CX205 - 2.5mm Thick Riving Knife.**
Only use for 10” diameter with 3.0mm minimum kerf width and 2.0mm maximum body thickness.

**CX206 - 2.5mm Thick Riving Knife.**
Only use for 12” diameter with 3.0mm minimum kerf width and 2.0mm maximum body thickness.

---

**WARNING**

*The CX205/CX206 blade is sharp. Wear heavy duty leather gloves while installing the blade for the protection of your hands.*
Fence Tape Scale

Slide the fence against the blade and lock it in position. Place the adhesive backed tape scale on the fence tube so that the “0” on the tape scale is aligned with the red pointer. Mark the “0” on the rail tube with a marker. Remove the fence and peel off the adhesive backed tape scale. Align the marked point with the “0” on the scale and attach the scale to the rail tube.

If you make any mistakes while attaching the adhesive backed scale to the rail tube, loosen the screws on the pointer window and slide the fence against the blade. Adjust the pointer so that the red line on the pointer window is over “0” on the tape and tighten the screws.

Blade Guard & Anti-Kick Back Pawls

Take your blade guard and place the slot for the blade body over the riving knife. Locate the middle notch of the riving knife and insert the rear pin of the blade guard into that notch. After, insert the front pin at the blade guard into the front notch of the riving knife. Ensure the blade guard is in the correct position and tighten the wing nut.

Place the set of Anti-Kickback pawls onto the riving knife at the notch. Press the pawls completely down and tighten the wing nut in position.

**WARNING**

Do not remove the anti-kick back pawls in normal operations, unless you find it necessary. The anti-kick back pawls prevent kick backs while cutting. Removing the anti-kick back pawls increases the risk of serious injury to the operator.
Table Insert

You can now install your table inserts. Ensure that the blade insert and the dado insert and clean and free from any dirt before installation. Using your hand wheel, lower the blade completely below your table and place the insert into position with the blade cut out on the blade side of the table. The insert should sit completely flush with the table surface. Use a straight edge to ensure it is flush.

If you need to make adjustments to the insert, remove the insert and turn it upside down and lay it on a flat surface (not your table saw). The insert comes with adjusting screws located on each corner of the insert. Adjust each corner screw up or down to get it flush with your table. Once you have a good fit, ensure that each screw is sitting in the table casting snugly. (Repeat this process for the dado blade insert if necessary).

 concentrated on the blade side of the table. The insert should sit completely flush with the table surface. Use a straight edge to ensure it is flush.

If you need to make adjustments to the insert, remove the insert and turn it upside down and lay it on a flat surface (not your table saw). The insert comes with adjusting screws located on each corner of the insert. Adjust each corner screw up or down to get it flush with your table. Once you have a good fit, ensure that each screw is sitting in the table casting snugly. (Repeat this process for the dado blade insert if necessary).

**WARNING**

Only use the table insert for the correct cutting operation. DO NOT use the dado insert with a regular blade and vice versa.

Arbor Extension

First, clean off the taper and threads of the arbor. You can use a dry lubricant when installing the arbor for best results. Next, install the arbor extension into the spindle.

The standard extension for the CX206 12” blade is 1” in O.D x 3” in length. Insert a 8mm hex wrench into the 8mm socket at the outboard end of the arbor extension and thread the arbor in by hand. Place the spanner wrench on the inside blade flange with two prongs on the spanner wrench inserted into the two holes in the flange. Make sure the arbor is properly installed and that it is not over tightened.

**CONNECTING TO A DUST COLLECTOR**

CX205/CX206 features a 4” diameter dust ports to connect to a dust collector.

When connecting to a dust collector, use a proper sized hose and make sure all the connections are sealed tightly.

![Figure-14 Installing the table saw to a dust collector](image)
**BASIC CONTROLS**

The basic controls of this machine are shown in the figure below. Use the figure and read the text to understand what the basic controls of this table saw are.

![Diagram of Basic Controls](image)

**A. Fence Cam Lock:** To lock the fence in position on the rails.

**B. Blade Tilt Hand Wheel:** To adjust the blade tilt, unlock the lock on the hand wheel and turn the hand wheel to set the blade to the desired tilt position and re-tighten the lock.

**C. Blade Height Hand Wheel:** To adjust the blade height, unlock the lock on the hand wheel and turn the hand wheel to the desired height and re-tighten the lock.

**D. Magnetic Switch:** The magnetic switch with on/off buttons turns the motor on and off.

**Figure-15 Basic Controls of the saw**

---

**TEST RUN**

Once you have assembled your machine completely, then it is time for a test run to make sure that the machine works properly and is ready for operation.

During the test run if there is any unusual noise coming from the machine or the machine vibrates strangely, stop the machine immediately and disconnect from the power source and investigate if you can find out the problem with your machine.

If you find out any part of the machine that is not assembled properly, read the assembly section of manual and reassemble that part according to the instructions provided in the manual.

---

**Read the manual**

Before starting the table saw, make sure that you have read and understood the manual and you are familiar with the functions and safety features on this machine. Failure to do so may cause serious personal injury.
ADJUSTMENTS

Blade Alignment

Your CX205/CX206 table saw is shipped from the factory fully aligned so that the mitre slots are parallel to the saw blade. However, shipping and rough handling may have affected this. It should be checked and adjusted if needed.

To check the alignment, clamp a dowel to the front of the miter gauge and raise the saw blade and pick out a saw tooth on the front of the blade and set the dowel in front of the miter gauge so that the dowel end just touches the edge of the saw tooth. Mark the tooth with a felt marker and rotate the saw blade by hand to bring the marked tooth to the rear of the saw. Now, gauge this tooth with the dowel. If the tooth is in the same position, the blade is parallel to the miter slot.

Blade Height Adjustment

The hand wheel on the front face of the saw cabinet is to control the blade height.

To adjust the blade height, loosen the knob and turn the hand wheel to set the blade at the desired height. Rotate the knob clockwise and tighten it back.

Blade Tilt Adjustment

The blade can be tilted at any angle between 90-degree and 45-degree and the blade tilt is controlled by the hand wheel on the side of the saw cabinet. There are positive stops at both 45 and 90 degrees. The tilt angle dial at the front face of the cabinet shows the angle the saw blade is sitting at.

To adjust the blade tilt, loosen the hand wheel lock knob and rotate the hand wheel until the blade is at the desired angle. Keep an eye on the tilt angle dial and once the blade is at the desired angle, lock the hand wheel by rotating the lock knob.

Make sure not to over tighten the lock knob.

Fence Adjustment

The fence should be flush with the table surface. To raise or lower the fence, use the nylon screws.

The edge surfaces of the fence must be perpendicular to the table surface. Use a combination square for verification and adjust the nylon square as required.
Adjusting the Riving Knife

The riving knife comes, pre installed on your saw. First, using the hand wheel, raise the installed blade completely to access the riving knife. Make the locking wing loose enough so you can raise the riving knife to its highest position. The dual position riving knife has two holes for two different positions.

The lowest position is for Dado Cuts and the highest position is for thru cuts.

Ensure that the locking pin is aligned with the riving knife hole and secure in position simply by tightening the wing nut. Your riving knife MUST be in-line with your blade. Ensure that riving knife is sitting flat against the lock plate and the mounting bracket.

You always want to ensure that the gap between the blade and the riving knife should be an even distance across the complete radius. First, loosen the two socket head cap screws on the riving knife bracket enough so that the you can move the bracket bring the riving knife in line with your saw blade. Again you will want to ensure that the gap between the blade and the riving knife is even from 3mm to 8mm in radius.

After you have properly adjusted and aligned your riving knife, tighten the socket head cap screws.

Miter Gauge Adjustment

The gauge supplied with the CX205/CX206 table saw is equipped with individually adjustable stops at 90 and 45 degrees both left and right. Adjustment to these stops can be made by loosening the locking nut and tightening or loosening the three adjusting screws. Tighten the locking nut. The face of the mitre gauge has two holes for attaching an auxiliary face. The mitre gauge is a precision tool and is guided through either mitre ‘T’ slot through the use of a guide mounted at the front of the mitre gauge bar.

To install the mitre gauge, place the gauge into the slot at the back edge of the saw table and then pull it forward. To operate the mitre gauge, loosen the handle to move the gauge head to the desired angle and tighten the handle. To go beyond the stops at 45 and 90 degrees in either direction, lower the stop pins.

Figure-18 Miter Gauge
OPERATIONS

Before operating the table saw make sure you have performed the important adjustments and all the guards are in place.

Rip Cutting
Cutting solid wood with the grain or with plywood cutting down the length of the work-piece is called rip cutting.

Adjust the fence on the rails, according to the width of the cut on the work-piece and turn the hand-wheel to set the blade approximately ¼” above the work-piece.

Use safety devices such as feather boards to prevent kick back.

Now, turn the table saw ON and use a push stick to push the work-piece against the blade.

Crosscutting
Cutting solid wood across the grain and in plywood or metal cutting across the width of the work-piece is called crosscutting.

Mark the work-piece where you want to start the cut from and make sure the mitre gauge is at a 90° position on the mitre slot.

Place the work-piece on the table so that the marked point is aligned with the blade and hold the work-piece against the mitre gauge and turn the hand-wheel to set the blade approximately ” above the work-piece. Turn the table saw ON and feed the work-piece against the blade.

Miter Cuts
Miter cut is an angled crosscut. It is done in the same manner as crosscuts but using mitre gauge.

Make sure all the guards are in place and place the miter gauge face against the edge of the work piece and place the bar of the miter gauge on the work piece. Use the bar and mark the angle of your cut with a pencil.

WARNING
Do not use your fingers to feed a narrow work-piece into the blade. If you slip, your fingers might go against the blade. Always use a push stick.

Figure-198 Marking the angle of the cut
Position the miter gauge back into the slot and hold the work piece against the mitre gauge. Slide the mitre gauge and feed the work piece into the blade so that the blade cuts the waste side of the work piece.

**MAINTENANCE**

1. Clean off any preservative on the saw components with mineral spirits and wipe dry.

2. Avoid getting any of the cleaning material on rubber parts as it may permanently damage them.

3. Use a mild soap and warm water on plastic or rubber parts.

4. The unpainted components such as the precision-ground cast-iron table top should be protected with a coat of paste wax and then buffed dry.

5. Regularly vacuum all sawdust from the saw’s interior and vacuum the motor openings as well.

6. Lubricate the trunnion and worm gears with quality white grease on a regular basis.

7. Lubricate all moving parts, internal bearings and wear surfaces being very careful not to allow any lubricant to come in contact with areas where wood will contact.

8. Check drive belts for wear and correct tension on a regular basis.

9. Check that the blade guard and anti kickback pawls operate properly.

**WARNING**

Always make sure the blade guard is installed on your table saw and is in down position. Failure to do so may result in serious personal injury.

**WARNING**

Do not make any adjustments while the machine is running. Turn off the machine and un-plug from the power source before making any adjustments.
OPTIONAL ACCESSORIES

These are just a few of the optional accessories available for your CX-Series Table Saw. Check [www.busybeetools.com](http://www.busybeetools.com) for more information and current pricing.

**Sliding Table Attachment**

Smooth Gliding Sliding Table
Allows for Cutting Larger Stock

- 30"x18" cast iron table with 12" extension
- Swing arm support
- Will fit CX205 & CX206

Model CX205ST

**Extension Table**

Add a Solid & Functional Extension Table to Your Saw

Model CX205EXT (for CX205)
Model CX206EXT (for CX206)

**Carbide Dado Sets**

High Quality Dado Sets for Chip FreeDados

Model CBT016 Dado Set for Solid Woods

Model CBT017 Dado Set for Laminates & Plywoods

**Ear Protection**

Model B2517
Model B2756

**Digital Fence Readout**

Get precise digital Readouts on your fence.

Craftex warrants every product to be free from defects in materials and agrees to correct such defects where applicable. This warranty covers **three years** for parts and 90 days for labour (unless specified otherwise), to the original purchaser from the date of purchase but does not apply to malfunctions arising directly or indirectly from misuse, abuse, improper installation or assembly, negligence, accidents, repairs or alterations or lack of maintenance.

*Proof of purchase is necessary.*

All warranty claims are subject to inspection of such products or part thereof and Craftex reserves the right to inspect any returned item before a refund or replacement may be issued.

This warranty shall not apply to consumable products such as blades, bits, belts, cutters, chisels, punches etceteras.

Craftex shall in no event be liable for injuries, accidental or otherwise, death to persons or damage to property or for incidental contingent, special or consequential damages arising from the use of our products.

**RETURNS, REPAIRS AND REPLACEMENTS**

To return, repair, or replace a Craftex product, you must visit the appropriate Busy Bee Tools showroom or call 1-800-461-BUSY. Craftex is a brand of equipment that is exclusive to Busy Bee Tools.

For replacement parts directly from Busy Bee Tools, for this machine, please call 1-800-461-BUSY (2879), and have your credit card and part number handy.

- All returned merchandise will be subject to a minimum charge of 15% for re-stocking and handling with the following qualifications.
- Returns must be pre-authorized by us in writing.
- We do not accept collect shipments.
- Items returned for warranty purposes must be insured and shipped pre-paid to the nearest warehouse
- Returns must be accompanied with a copy of your original invoice as proof of purchase. Returns must be in an un-used condition and shipped in their original packaging a letter explaining your reason for the return. Incurred shipping and handling charges are not refundable.
- Busy Bee will repair or replace the item at our discretion and subject to our inspection.
- Repaired or replaced items will be returned to you pre-paid by our choice of carriers.
- Busy Bee reserves the right to refuse reimbursement or repairs or replacement if a third party without our prior authorization has carried out repairs to the item.
- Repairs made by Busy Bee are warranted for 30 days on parts and labour.
- Any unforeseen repair charges will be reported to you for acceptance prior to making the repairs.
- The Busy Bee Parts & Service Departments are fully equipped to do repairs on all products purchased from us with the exception of some products that require the return to their authorized repair depots. A Busy Bee representative will provide you with the necessary information to have this done.
- For faster service it is advisable to contact the nearest Busy Bee location for parts availability prior to bringing your product in for repairs.
